

HoldMeTolt — MVP Feature & Requirements Breakdown

Status: MVP Baseline Specification

Target Delivery: 2–3 Weeks (3–4 Developers)

Tech Stack: *Stack-Agnostic (Pending Group Consensus)*

1. Objective & Success Metric

- **Mission:** Eliminate "Admin Burnout" and manual Google Sheets management for Discord study battles by automating event creation, self-logging, leaderboard calculations, and punishment enforcement.
- **Core Success Metric:** A host can run an entire week-long study challenge from setup to punishment enforcement with **zero Google Sheets** and **zero manual formula calculation**.

2. User Roles & Access

Role	Access Level	Core Actions
Spectator / Guest	Public Read-Only	View match scoreboard, standings, and download punishment PFP.
Participant	Authenticated User	Declare target hours and goals (pre-event), self-log daily hours (HH:MM:SS), check off tasks.
Admin / Host	Full Control	Create challenges, assign teams, edit/override hours, unlock goals, lock final results, generate Discord announcements.

3. Challenge Formats & Core Rules

1. **Formats Supported:**

- **Team vs Team:** Two balanced rosters (e.g. *Bees vs Butterflies*).
- **Duos ($N = 2$):** Two-person accountability pairs.
- **Free-for-All ($N = 1$):** Individual server-wide leaderboard.

2. **Scoring:** Cumulative total study hours logged during the event window.

3. **No Grace Days (Catch-Up Model):** Missed hours on any day can be compensated on remaining days. A dynamic deficit tracker calculates the required daily pace to stay on track.

4. **Punishment Trigger:** Auto-flagged if a participant fails **either**:

- Total logged hours < Declared target hours.
- Any mandatory weekly to-do goal remains uncompleted.

5. **Punishment Asset:** Direct web download button for the server's **Punishment PFP**. Host has manual override power to pardon/excuse emergencies.

4. MVP Feature Breakdown

HoldMeToIt MVP

- └─ 1. Authentication & Identity
 - | └─ Discord OAuth Login (Discord ID, username, avatar)
 - | └─ Public Spectator Mode (no login required to view)
- └─ 2. Admin Challenge Operations
 - | └─ Event Creator (Title, Start/End timestamps, Mode, Team Roster)
 - | └─ Manual Override Grid (Edit any logged hours or goal state)
 - | └─ Challenge Finalize & Lock (Freezes all participant edits)
 - | └─ 1-Click Discord Summary Generator (Formatted text copied to clipboard)
- └─ 3. Participant Pre-Event Declaration (Locked once event starts)
 - | └─ Declared Weekly Study Target (`HH:MM:SS`)
 - | └─ Mandatory Weekly Goals List (Tasks to check off)
- └─ 4. Daily Logging & Personal Dashboard
 - | └─ Clock-Time Input (`HH:MM:SS` for selected day)
 - | └─ Weekly Progress Gauge (% completed, hours remaining)
 - | └─ Daily Catch-Up Pace Calculator ("Need Xh Ym/day to hit target")
 - | └─ Interactive Task Checklist (Check off finished goals)
- └─ 5. Live Scoreboard & Standings
 - | └─ Head-to-Head Banner (Team totals, current leader, lead delta)
 - | └─ Roster Standings Table (Rank, Member, Hours, Target, Tasks, Status)
 - | └─ Punishment Wall (Flagged list + Download Punishment PFP button)

5. Key Calculations & Business Rules

1. **Clock Precision:** All study times are stored in total seconds and rendered as HH:MM:SS .
2. **Locking Rule:** Once the event start time arrives, participant declared targets and task descriptions are permanently locked (editable only via host override).
3. **Deficit Pace Formula:**

$$\text{Remaining Seconds} = \max(0, \text{Target Seconds} - \text{Logged Seconds})$$

$$\text{Required Daily Pace} = \frac{\text{Remaining Seconds}}{\text{Days Remaining}}$$

4. Punishment Validation:

$$\text{Flagged} = (\text{Logged Seconds} < \text{Target Seconds}) \vee (\text{Incomplete Tasks} > 0)$$

6. Strict MVP Non-Goals (Post-MVP)

- ❌ Automated YPT scraper / mobile bot daemon.
- ❌ Automated Discord bot webhooks or slash commands (manual copy-paste text for MVP).
- ❌ In-browser stopwatch / Pomodoro timer anti-cheat.
- ❌ Automated MMR / skill-based matchmaking.
- ❌ Payment / wagering integrations.

7. Suggested 3–4 Developer Allocation

Developer	Primary Responsibility Focus
Dev 1 (Identity & Data)	Auth flows, core entity schemas, database migrations, challenge lifecycle states.
Dev 2 (Engine & Math)	Time parsers (HH:MM:SS), deficit calculators, punishment validation logic, test suite.
Dev 3 (Participant UI)	Participant cockpit, HH:MM:SS input component, weekly task checklist, progress gauges.
Dev 4 (Admin & Standings)	Live match banner, leaderboard table, manual override grid, Discord summary generator.
